✉ kaungmyataung1162004@gmail.com

📍 Alor Setar, Kedah, Malaysia

ABOUT ME

Passionate Software Engineer and Data Engineer with a strong foundation in building scalable data pipelines, bioinformatics tools, and full-stack applications. Currently pursuing a Bachelor's in Computer Science while gaining hands-on experience in MLOps, genomic data processing, and cloud-native application development. Combines technical expertise in Python, Nextflow, and modern web technologies with a deep interest in life sciences and healthcare solutions.

EDUCATION

Albukhary International University | 2024-Present

Bachelor's in Computer Science | 2025 - Present

- Core Modules - Software Engineering, Machine Learning, Data Science, Cloud Computing
- Academic Achievement - Selected for InteRussia STEM fellowship 2026 by Gorchakov Foundation

Foundation in Computing | 2024 - 2025

- Core Modules - Foundational Programming (C/C++), Web Programming, Database Management System
 - Academic Achievement - 2025 Hult Prize On-Campus winner
-

WORK EXPERIENCE

Walter and Eliza Hall Institute of Medical Research (RCP) | 2025 - 2026

Big Data Engineer | Open Source Contributor (Remote Internship)

Contributed to the REDMANE ecosystem, developing synthetic multi-omics data workflows for genomic research at one of Australia's leading medical research institutes.

Key Responsibilities:

- Genomic Data Processing, Developed Bioinformatic Pipeline

Cad Crowd | 2021 - 2023

CAD Drafter | IoT Modeller (Remote)

Delivered high-quality 3D CAD designs for diverse international clients across multiple industries.

Key Responsibilities :

- 3D Design & Modeling, Client Management, System Maintenance and Quality Assurance
-

SKILLS

- | | | |
|--------------|------------------|--------------|
| • Python | • Nextflow | • Docker |
| • JavaScript | • Pandas & NumPy | • Linux/Unix |
| • PHP | • Scikit-learn | • Git |
| • C | • Biopython | • Apache |
| • Bash/Shell | • MySQL | • NGINX |
-

COMPETITIONS AND AWARDS

Hult Prize On-Campus Winner (2025) - Albukhary International University

Project - EcoTech | IoT based Prosthetic Hand from Plastic Waste

Overview

Won the campus-level Hult Prize competition with an innovative IoT project addressing plastic waste through sustainable prosthetic manufacturing.

Responsibilities and Contributions

- Designed a solution transforming plastic waste into affordable prosthetic hands
- Integrated IoT technology for enhanced functionality
- Developed a sustainable, eco-friendly approach to medical device manufacturing
- Collaborated with a multidisciplinary team to deliver a compelling pitch

INNOVATEX-FC 2025 Competition (2025) - Albukhary International University

Project - Center of Research and Innovation Management System

Overview

Won the INNOVATEX-FC 2025 competition with a dynamic research publication management system developed with team The Debuggers.

Responsibilities and Contributions

- Developed a full-stack research publication management platform
- Built an interactive analytics dashboard for research tracking
- Implemented submission workflows and portfolio management features
- Collaborated with Team Debugger to deliver a comprehensive solution

PUBLICATIONS

Fast Track Report: WEHI RCP Internship Intake 15 — REDMANE Workflow Team

Zenodo | March 2026 | v1

Co-authored research report on synthetic multi-omics data pipelines - [View Publication](#)

PROJECTS

REDMANE Workflow Pipeline

WEHI — Research Computing Platform | 2025-2026

Overview

Contributed to the REDMANE ecosystem by developing a synthetic multi-omics data workflow for genomic research.

Contributions

- Built an end-to-end short-read variant calling pipeline
- Transformed raw sequencing data (FASTQ) into processed (BAM) and summarised (VCF) outputs
- Worked with Genome in a Bottle (GIAB) datasets for realistic genomic analysis

Outcomes

- Reproducible pipeline for downstream research integration

Tech Stack: Python · Nextflow · SAMtools · BCFtools · BWA · Linux · Bash · Git

Protinus

Protein Structure Molecular Visualization Tool

Overview

Developed a web-based interactive 3D visualization tool for protein structure analysis.

Key Features

- Real-time 3D rendering using NGL.js
- Multiple molecular representations (cartoon, surface, ball-and-stick)
- PDB file upload and exploration
- Flask REST API for backend processing

Outcomes

- Enables researchers to visualize protein structures in-browser
- No software installation required
- Extensible for computational analysis

Tech Stack: Python · Flask · NGL.js · JavaScript · HTML/CSS · Docker

Link - [Live Demo](#)

AIU | CRIM

Research Publication Management System

Overview

Created a comprehensive platform for research publication management and analytics at AIU.

Key Features

- Publication submission and approval workflow
- Interactive analytics dashboard with Chart.js
- User portfolio and submission tracking
- Advanced search and filtering

Achievement:

- **1st Place — INNOVATEX-FC 2025 (Team The Debugger)**

Tech Stack: PHP · MySQL · Chart.js · HTML/CSS · JavaScript · REST APIs · Apache

EcoTech

IoT Prosthetic Hand from Plastic Waste

Overview

Developed an affordable, sustainable prosthetic device using recycled plastic waste and IoT technology.

Key Features

- EMG sensors detect muscle signals for precise control
- 3D-printed components from recycled plastic
- Arduino-powered real-time control system
- Cost-effective and accessible solution

Achievement:

- **Campus Winner — Hult Prize 2024**

Tech Stack: Arduino · EMG Sensors · 3D Printing · CAD · IoT · Signal Processing
